Birefringence of Talc vs. Chrysotile

Chrysotile: **Lower** Birefringence (Colors **Closer Together**)

Talc: **Higher** Birefringence (Colors **Farther Apart**)

SHADE OF YELLOW IMPACTS ONE SIDE OF BIREFRINGENCE

Figure C.1 — Central stop dispersion staining colours for chrysotile in 1,550 RI liquid

Dr. Su's Method: Avoid Yellow "At All Cost"

DETERMINATION OF REFRACTIVE INDICES OF
ASBESTOS MINERALS BY DISPERSION STAINING:
WHY AND HOW

is in the *ultraviolet* (instead of the visible) range. Experience tells us that "yellow" is the hardest CSDS color to be quantified and should be avoid at all cost. The same yellow CSDS color could be called "golden yellow", "yellow", "light yellow", "pale yellow", etc., by different analysts and, in the meantime, is more susceptible to the color temperature of light source and the type of daylight filter used than other CSDS colors.

Yellow Interpretation Problem Not Limited To Amphiboles

Case 3:16-md-02738-MAS-PLS Document 330-17-19 Filed 07/23/24 Page 11 of 21
PageID 225567

20 BY MR. HYNES:

21 Q. Okay. And that issue about the interpretation
22 of the color yellow, that's not limited to just
23 amphibole structures, that's something that Dr. Su, in
24 this document, is noting is a problem inherent to the
25 interpretation of structures that show the color yellow

Page 99

1 in central-stop dispersion standing oils, right?

2 MR. KRAMER: Objection to form.

3 THE WITNESS: Yes. He doesn't ever put that
4 in any of the handouts that he gave out in the past, it
5 was always amphiboles. But now, surprisingly -- not
6 surprisingly, he's now stepping in this.!

Dr. Longo's "Chrysotile": White Balancing

White Balancing

Case 3:16-md-02738-MAJ-RLS Document 330-17-19 Filed 07/23/24 Page 15 of 21 PageID #: 225571

Appropriately White Balanced PLM Analyses

Mr. Poye's PLM (VT talc)

No asbestos was detected by PLM.

*100X Magnification dispersion
staining of Talc Particles
1.550 refractive index oil*

Dr. Sanchez's PLM (VT talc)

No asbestos detected

1.550 refractive index oil

Case 3:16-md-02738-MAS-RLS Document 33017-19 Filed 07/23/24 Page 16 of 21
PageID 225572

Dr. Longo's "Chrysotile": White Balancing

How Should Birefringence Be Calculated?

Parallel: **Highest** (Farthest to the **Left**)

Perpendicular: **Lowest** (Farthest to the **Right**)

Dr. Longo Uses Averages

Moves Refractive Index Values **Closer Together**
(**More Like Chrysotile**)

Case 3:16-md-02738-MAS-RLS Document 33017-19 Filed 07/23/24 Page 19 of 21
PageID 225575

Averages Not in Published Method

17 Q. Well, but I want to make -- I want to make
18 crystal clear that there's no question you're using
19 averages instead of high or low. Right? High and low.

20 A. We do use an average, yes, as I've stated. 09:36:52

21 Q. And in terms of that technique, you don't know
22 of anywhere where the technique that you're using has
23 been published or put into a scientific method; right?

24 A. I'm not aware of any, no.

Dr. Longo's Chrysotile: What Color Is This?
